<b>Package contents</b>	- Mini build-in transmitter - Manual
<b>System requirements</b>	- Existing single/double wall switch with no 230V power connection - Trust Smart Home receiver

### Marketing

<b>Extended retailer text</b>	This flush-mounted transmitter (AWMT-003) is a unique transmitter that turns a wall switch into a wireless Trust Smart Home transmitter. You can install this transmitter behind any brand of (designer) wall switch without having to connect any electrical wires. This transmitter is therefore an ideal solution if you want to keep your existing switchgear and at the same time benefit from wireless control, or if you have forgotten to install wires
-------------------------------	---

and still want to use the same switchgear throughout your home. Ideal for a window frame that incorporates multiple switches or sockets of a certain type of switchgear.

The built-in transmitter is battery-powered and can be installed behind both single and double switches, thanks to its two channels. Place the transmitter in an empty wall box behind the switch and connect it to the existing switch using the supplied switch wires.

- Use any brand of wall switch without connecting it with wires
- Ideal for junction boxes/connection boxes that do not contain electrical wires
- Compact: can be placed invisibly behind the wall switch
- The transmitter can be combined with Trust Smart Home receivers

Please note: It is important that you do not connect this transmitter to the electrical wires, as this will result in a malfunction. Furthermore, this built-in transmitter cannot be installed behind a dimmer or pulse switch, but only behind a single or double wall switch. When you then use the switch, the built-in transmitter sends a signal to the connected Trust Smart Home receiver(s).

From smart solutions to a Smart Home

With the Smart Bridge, you lay the foundation for your smart home. Connect all your Trust Smart Home products to the Bridge and control everything – from lighting to electric curtains – with your smartphone or tablet. Or set timers, rules and scenes as desired to fully automate your system. For example, the lights will turn on in the evening when you are on holiday and the central heating boiler will be switched off if the CO detector detects a carbon monoxide leak.
