## Marketing

### Extended retailer text

This Trust mini build-in mains switch AWS-3500s is designed to make your life easier. Install it behind an existing mains socket, plug in your light or other devices into the socket and you can switch all your lights and devices up to 3500 Watt. Right from the comfort of your couch!

#### Connect for control

To wirelessly control this receiver, you can combine it with a broad range of start line transmitters (433 MHz) from Trust Smart Home. You'll have many possibilities since the built-in switch can be connected to as much as 32 transmitters. Use for example the AYCT-102 remote to control the socket switch individually or control multiple power switches at the same time. Or connect the socket switch to a door sensor such as the ALMST-2000 Magnetic Contact Sensor so your lights will turn on when you enter that dark attic. This built-in switch gives you the opportunity to make your home smart.

#### Endless possibilities

Want even more possibilities? Connect the built-in mains switch to the free Trust Smart Home app by using the ICS-2000 control station and you can control your lighting or other devices via your phone or tablet wherever you are in the world: you'll have the light switch in the pocket of your pants!

#### Smart and safe design

It can be placed in any indoor power socket and their compact design makes sure it can easily be installed behind an existing mains socket. It is the perfect clean and invisible solution for wireless switching! The wireless range of 50 meters inside makes them usable everywhere in your home.
