### Marketing

<b>Extended retailer text</b>	Choose smart lighting! This smart WiFi E14 LED bulb from Trust Smart Home WiFi is very easy to operate with your smartphone, wherever you are. Thanks to the adjustable color temperature, you can switch between extra
-------------------------------	---

---

warm light for a romantic evening and white light for optimal concentration.

All you need is WiFi!

Do you have WiFi? Then you also have access to smart lighting. Thanks to this smart LED bulb, you can now control your lighting with your smartphone, wherever you are. Add the smart LED bulb to the free Trust Smart Home WiFi app and use your phone or tablet as a remote control, without the use of an expensive hub. All you need is an internet connection. Switching to smart lighting has never been easier!

All smart options at your fingertips.

With Trust WiFi you bring a lot of convenience into your home. You can not only control your lights with your smartphone, but also automate it in the free app. With the timer settings you can switch all smart lamps on and off at a fixed time or even set them to a specific dim setting.

Choose the atmosphere that suits the moment.

With this tunable LED bulb you can easily switch between warm white light and daylight. Using the color bar in the app, you can set any desired light color between 1800K (flame) and 6500K (daylight). Go for extra warm light on a romantic evening or choose daylight when extra concentration is required.

Or choose from one of the four pre-programmed scenes to automatically change your bulb's color temperature. You can choose from the following scenes: night, reading, party and leisure.

Smart scenarios

Would you like to switch your bulb at fixed times or switch on several lights at the same time? Thanks to the app's "smart scenarios", it is possible to create your own scenes and automate your lighting as desired using timers and conditions. For example, you can use your location or the weather to control your smart lights. This way your lighting will switch on when you are almost home or as soon as the sun sets.

Talk to your system.

"Hey Google, turn on the kitchen light", "Alexa, dim all the lights". If you have a Google Nest or an Amazon speaker, you can also control and dim your lights with simple voice commands.

Expand easily

Get even more out of your smart home with the smart WiFi plug from Trust Smart Home. Just like the smart lights, you can add this plug to the app and make it possible to operate your lights or devices with your smartphone.
