Package contents	- Smart socket switch - Manual
System requirements	- Smart Bridge

Marketing

Extended retailer text	Choose smart. This smart socket makes your lighting smart. Connect your lamp or device to the smart plug and control it with
-------------------------------	---

the free Trust Smart Home app on your smartphone or tablet, wherever you are.

Lights out.

Thanks to Zigbee, the smart socket switch confirms the status of your lamp or device on your phone. This way you can be 100% sure that your lamp is really off, even when you are not at home.

Happy holidays!

Pretend that someone is home by automatically turning on your lights in the evening. For example, choose a fixed time at which you switch your lighting on and off and keep potential burglars out.

If you use smart security, such as the smart wireless smoke or carbon monoxide detectors from Trust Smart Home, then this socket switch is the perfect addition. Use the switch to switch off your boiler if the CO detector detects carbon monoxide or switch on a lamp as soon as the alarm of your smoke detector goes off. Smart security becomes even smarter!

Combine with the Internet Control Station.

The smart socket works in conjunction with the Internet Control Station. Connect the socket to the Internet Control Station, add it to the Trust Smart Home app and automate your lighting or device with timers and smart scenes.

Wide Compatibility.

The smart socket works with all lights and other devices up to 3500 watts. Installation is very simple: the LED on the socket switch flashes every 4 seconds and the switch automatically enters pairing mode when plugged into the socket. Choose the desired room in the app, select the smart socket switch and press pair. From now on you can simply operate your light or device with your smartphone.

You can also operate this socket switch manually by pressing the on/off button on the housing.
