XYRA GASKET KEYBOARD
# Software manual

Setting up the software
Follow these steps to download the software.

1.   Download the software from http://www.trust.com/25729/
2.   Unpack the .zip and install the software.
3.   During the installation select your keyboard version: ANSI or ISO.
         ANSI: Select this option if you have a small Enter key (US/Dutch layout).
         ISO: Select this option if you have a large Enter key (common in Europe: UK, Italy, Germany, Spain, France, Nordics, Belgium, etc.).

4.   Finish the setup and connect your Xyra using the supplied USB-A to USB-C cable. You can now start the software.

Software manual

Using the software

Click on the keyboard icon on the left side of the program to access various customization options for your keyboard. You can assign different symbols to keys or even program mouse buttons onto your keyboard.

In the image below, you'll see all the options you can program:

Keyboard	Mouse	Multimedia	Macro	Commands	Key combination

Keyboard: Standard full-size keyboard functions you can assign to your Xyra.
Mouse: Assign mouse functions to your Xyra.
Multimedia: Choose from various multimedia shortcuts (like volume control, play/pause, etc.).
Macro: Any macros you've created (see page 4) will appear here and can be assigned to keys.
Commands: Assign system commands like "Show Desktop", "Task Manager", etc.
Key combination: Create your own shortcuts using combinations like Control, Windows, Alt, or Shift. For example, you can assign Ctrl + V to the F3 key.

How to use it
First, choose whether you want to program the "Main layer" or the "FN1 Layer":
Main layer: The function is activated directly by pressing the key.
FN1: You can only use your assigned key in combination with the FN key.

1. Click the key you want to program. A faint white border will appear around it when selected.
2. Choose the key function you want to assign.
3. Press the "Save" icon on the right side.
4. Assigned keys will turn blue.
5. To reset a key, you can select the key, press   and save.

GXTrust.

Changing LED

Click on the LED icon on the left side of the program.

You can select your preffered effect and, if available, adjust the speed, brightness and color. You can pick the option to show one color or randomize the colors (RGB).

To display the effect you selected, or changes you made, click on the save 💾 icon.

Customizing individual keys

To create your own colorful design, click on "Custom".

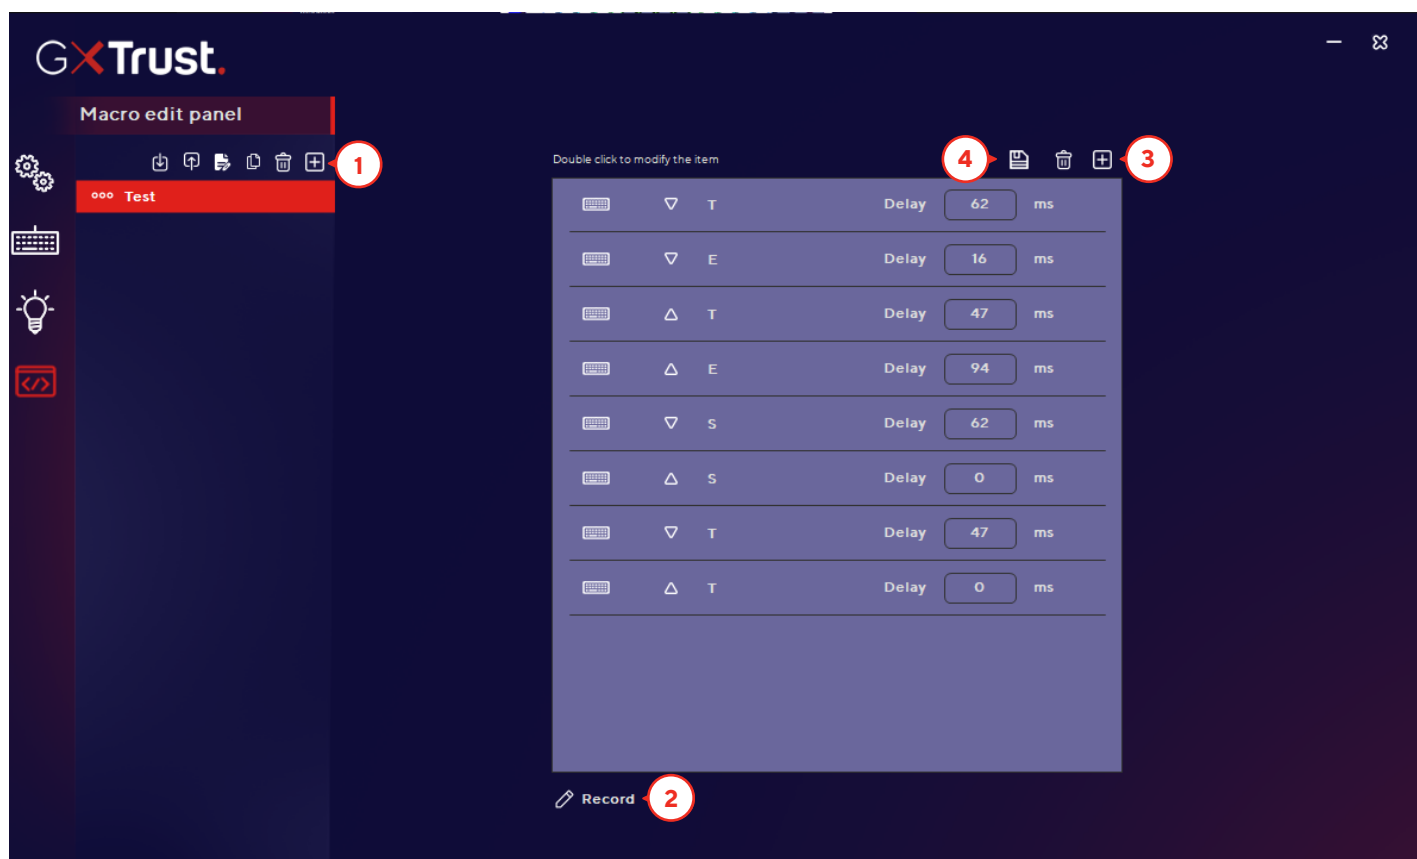

1.   Select a color
2.   Click on the key you want to change. *(Tip: You can select multiple keys by holding your mouse button and dragging over the keys.)*
3.   When you are finished click on the save 💾 icon

Software manual

Programming macros
Click on the "</>" icon on the left side of the program.

Follow the steps in the picture to create a macro.

1. **Create a new macro**
   Enter a name for your macro and click "Ok".
2. **Record your macro**
   Click on record and enter your macro. In this example we typed "Test".
   You can adjust the timings on the right side (in milliseconds) and make your macro faster or slower.
3. **Edit or add actions**
   If you forgot a key, or want to add mouse buttons use this section.
   To insert the new action between recorded keys, select the key in the list first.
4. Once you're done, click on the save button.

To assign your recorded macro, follow page 2.
