## Optimize your wireless range

The Zigbee bulbs and spots use meshing technology. This means that all connected Zigbee products can receive and repeat signals. They work as an amplifier so that the range of your network can be easily increased. This way you can fully enjoy the comfort that our Zigbee products offer.

## Live your life in colour

Illuminate your life with the beautiful colours of the Trust RGB Tunable E27 LED Bulb ZLED-RGB9. Everything is possible: create a warm ambience for a relaxing evening or choose to go full out with brilliant lighting. Select one of the 16 million colours to match your mood! Easily create a romantic atmosphere with warm light, or support your favourite sports team by colouring your living room in the club colours. Use the app to select one of the 16 million colours: there is always a perfect colour for every situation! \* The bulb is dimmable from 10% to 100% via the app or the ZYCT-202 remote control. In this way, your lights are always set to perfection. \*Note: ZigBee Control Station Z1 or ICS-2000 Internet Control Station is required for app use.

## Natural light throughout the day

Want more natural light in your home? This RGB Tunable LED Bulb creates the right light in every room, at any time of day. With the help of the rules in the Trust Smart Home app, you can easily set the light intensity according to the time of day: cool lights in the morning, regular intensity in the afternoon and warm light in the evening. \* When you turn on the bulb, the light intensity set for that time of day is automatically selected.

## Easy installation

The bulb can easily be placed in any E27 socket when this socket is connected to a regular switch and not a dimmer switch. The dim function is integrated into the bulb itself. The regular light switch is of course still usable to turn your lamp on and off. You can dim your lights from the comfort of your couch using the remote control or the app. \* Want some colour in your life? Simply use the app! \*Note: ZigBee Control Station Z1 or ICS-2000 Internet Control Station is required for app use

## ZigBee Compatibility

This bulb is part of the Trust Smart Home ZigBee line. This means that it is compatible with the other products from the ZigBee range. These products are easily identified by their product code, which always starts with a "Z". For example: "ZLED-RGBG6", "Z1" or "ZYCT-202". This bulb is also compatible with the Trust Smart Home ICS-2000 Control Station. All of these products work on the ZigBee protocol, the benefits of which are: Two-way communication: the products can send as well as receive signals. This means, for example, that you can see in the app whether a lamp is turned on or off. Very convenient for when you're not at home! Meshing network: all connected ZigBee products can receive and repeat signals, making each ZigBee product an amplifier that increases the range of your ZigBee network. Compatibility with other brands: The Trust ZigBee products are also compatible with other ZigBee certified systems such as Philips Hue, Osram Lightify or IKEA TRÅDFRI.

## Economical solution

The ZLED-RGB9 has a light output of 806 lumens which is comparable with a conventional 60-watt bulb, however, this LED bulb only uses 9 watts! LED lights use less energy: up to 90% less than a normal bulb. With this energy efficient ZLED-RGB9 bulb, you can easily save money. This is not all, the bulb has a lifespan of 20.000 hours which means you can create perfect lighting in your home for the next 20 years!
